

Replication Package - READ ME

1 System Requirements

Analysis was run using Stata version 17.0 for Mac on a MacBook Pro with 24GB RAM using Sonoma 14.6.1 macOS.

Time to run: Approximately 4.5 hours (10 minutes without generating randomized inferences).

Necessary space on HDD: 330MB

To facilitate reproducibility, all necessary datasets have already been generated and stored in the `data/processed` folder.

2 Survey Instruments

Instruments for all three surveys are available in the “Survey instruments” folder and on the NSP-IE website. The survey was administered in person using printed copies of the survey instruments.

3 Main File

Installing necessary packages, preparing data, and obtaining results can be performed by running `master_file.do` file.

4 Installing Necessary Packages

Prior to running the code install packages `outreg2` and `leebounds` by running the following two commands:

- `ssc install outreg2, replace`
- `ssc install leebounds, replace`

5 Preparing Data

The files are run in the following order:

1. `Prepare_panel.SIGACTS.do`

- The file takes as input the files:
 - (a) `SIGACTS_cleaned.dta`, which contains data on security incidents from Shaver and Wright (2016) as shared with us by the authors and transformed into Stata format. The original files can be obtained from Andre Shaver (ashaver@ucmerced.edu) or Austin Wright (austinlw@uchicago.edu)

- (b) `SIGACTS_cleaned_distances.dta`, which adds for each security incident the distances to each of the villages in the sample, calculated using ArcGIS software.
- 2. `Interactions_Ethnic_Projects_Matching_Security_data_Final.do`
- 3. `Combine_data_H_and_M_Full_SIGACTS_Final.do`
- 4. `Security_Index_for_summary.do`
- 5. `Baseline_Village_Characteristics.do`
- 6. `Prepare_panel_SIGACTS_data_indices_Final.do`

6 Obtaining Results

6.1 New Analysis

The analysis added for this class is contained in `New_Analysis_DS4SI.do`. This code was written with reproducibility in mind, so you can either run the master do-file or execute `New_Analysis_DS4SI.do` independently. Please ensure that all file paths are properly configured before running the code.

6.2 Main Text

Note that all the file names in xls format have the date at the end of their name.

Output	Do File
Table 1	<code>Table1.do</code>
Table 2	<code>Treatment_control_BS_Final.do</code>
Table 3	<code>Treatment_control_Summary_Outcomes_Final.do</code>
Table 4	<code>Security_Panel_regressions_Revision_Final.do</code>
Table 5	<code>Survey_results_H_and_M_Final.do</code>
Table 6	<code>Security_Panel_regressions_Revision_Final.do</code>
Table 7	<code>Security_Panel_regressions_Revision_Final.do</code>
Table 8	<code>Survey_results_H_and_M_Final.do</code>
Table 9	<code>Survey_results_H_and_M_Final.do</code>
